GHOSTS

GOING GOING GONE

The woodlands of Burrumbuttock once supported a great variety of native animals, but many are now disappearing or are gone from the area. Some still live nearby in large remnants such as Kentucky State Forest or Table Top Mountain and one day we may be able to get some of them back if we can provide the right habitat.

There were probably many reasons for their disappearance. Land clearing, competition for food, shelter and breeding habitat, introduced predators such as foxes and cats, and disease have all had an impact.

Look for the ghost signs hidden around the park and imagine that you can see them again.

Tuon
Phascogale tapochafa (110-310g)

Eastern Bluetongue Lizard
Tiliqua souchioides (49-55cm)

Diamond Fire-tail
Stegopetura guttata (12-13cm)

Koala
Phascogale cinerea (10-14kg)

Grey-crowned Babbler
Pamelotanus tenuirostris (29 cm)
